PROFILE

Senior Full Stack Engineer with 8+ years of experience, the last six building an insurance-industry platform on C#/.NET, Angular and Azure. The multi-tenant system serves 5 tenants and about 700 users, and I own features end to end: requirements, architecture, implementation, deployment and client feedback.

My work includes CRM and agent-recruitment workflows, document generation with Adobe Sign and DocuSign integrations, a dynamic query engine that replaced more than 20 manual reports, and a parameterized Azure Synapse pipeline that loads ~1.9M rows a day. I have also mentored part-time developers on the team.

users on a multi-tenant insurance platform

20+
manual reports replaced by Custom Views

~1.9M
rows a day through one Synapse pipeline

PROFESSIONAL EXPERIENCE

Trulydata · Senior Full Stack Software Engineer

2020 – Present · Remote

- Built a **Custom Views** engine that lets users define data views in the UI and generates the underlying database queries dynamically. It has **replaced more than 20 manual reports** and powers data-heavy screens.
- Migrated the analytics ETL from Spark Mapping Data Flows to a single **parameterized Azure Synapse pipeline** with automated scheduling and per-tenant retry. It now loads **~1.9M rows (~0.5 GB) a day**.
- Integrated **Adobe Sign and DocuSign** and built cloud-based **document generation and management** on Azure services and templates.
- Own development of a **multi-tenant insurance platform** serving **5 tenants and about 700 users**, built with **C#, .NET, Angular, Entity Framework Core, SQL Server and Azure**, in a team of three.
- Deliver CRM, agent-workflow and reporting applications for insurance companies, including a **configurable agent-recruitment platform** that adapts to each agency's requirements and supports digital signatures.
- Design business workflows around **Commands and Events**, giving critical operations traceability, asynchronous processing and activity logging, and keep tenants isolated with role-based access, permissions, subscriptions and Azure-based authentication.

- Write complex **SQL Server reports and stored procedures** for business-specific reporting needs.
- Ship to QA and production through **Azure DevOps CI/CD pipelines**, work directly with clients to gather requirements and iterate on their feedback, and have mentored part-time developers.

Freelance · Software Developer

2018 – 2020

- Built web platforms and Android apps for photography studios, using **React, Angular, Vue, Django, Python, Java and PostgreSQL** depending on the project.
- Built a Telegram bot on the **Moodle API** for automated file management.

TECHNICAL SKILLS

LANGUAGES & FRAMEWORKS	**C#** · **.NET** · **ASP.NET Core** · **Angular** · **TypeScript** · JavaScript · Python · Java · React · Vue
BACKEND & ARCHITECTURE	REST APIs · ABP Framework · **Entity Framework Core** · Commands & Events · Asynchronous Processing · Multi-Tenant Architecture · Authentication & Authorization · Domain/Application Layer Architecture
DATABASES & DATA	**SQL Server** · PostgreSQL · Cosmos DB · Stored Procedures · Dynamic Reporting · Data Migration
AZURE & DEVOPS	Azure Synapse · Azure Functions · Blob Storage · Azure Queues · App Services · Azure DevOps · CI/CD
INTEGRATIONS & PRACTICES	Adobe Sign · DocuSign · Git · Agile Development · Code Review · Mentoring · Jira · AI-Assisted Development

EDUCATION

Software Engineering

University of Holguín · Holguín, Cuba · 2018 – 2022

Thesis: Public Key Infrastructure (PKI) built on EJBCA.
